

1. Download the file (SE landings Bluefin update 11-26-2014.zip) to your computer desktop.
2. Extract the zipped file to your desktop.
3. Copy the 8 files and past to the Flash Drive. **Do not copy the folder to the Flash Drive**

The files must be at the root directory of the USB flash drive. The message terminal cannot find the files if they are in a folder on the USB flash drive.

Apply power to the message terminal allowing the easyMail application to start up, then close the easyMail application. Go to Start > My Computer > and double click on the Data (D :) drive, then open the folder named "easyMailData". Then open the folder named "html", and delete all the files in this folder, then close this window.

Insert the USB flash drive in the message terminal. It may take a few minutes for the terminal to detect the USB flash drive. Click OK when "Update TT-3036XP software using the program provided on the device" is highlighted in the "What do you want Windows to do?" window. This will run the update program.

Click Update button in the "Update TT-3036XP" window.

When update changes to "DONE", click on "DONE"

When the window pops up asking to restart computer, click "OK" and remove the USB flash drive.
